# ArticlesManager

The project provides an easy and convenient way to manage articles for the particular user. Project consists of two microservices: API written in Ruby on Rails and UI written in Angular. UI uses Single-page application pattern. PostgreSQL is responsible for data storage. Deployment tools include Docker and AWS.
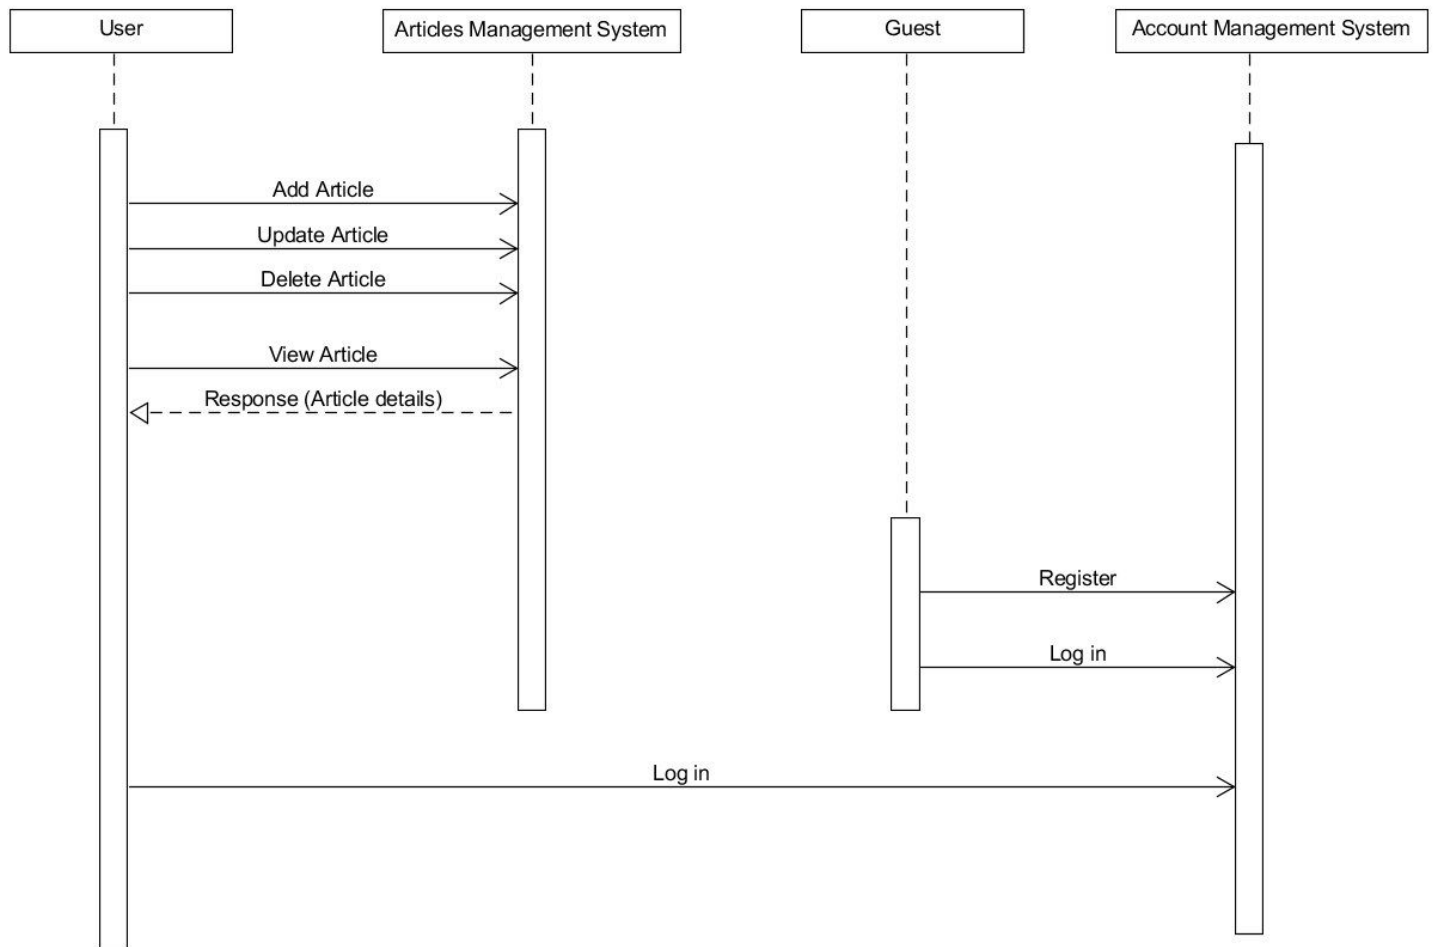

User roles: Guest, User

Role	Description
Guest	User that isn't logged in, can register and log in.
User	Logged in user, can view articles list, add/update/delete article, view detail information about the article, filter articles.
